

MEASURING FOR SUCCESSFUL DELIVERY

When choosing a piece of furniture, it's common to consider the measurements of the room. However, it is also important to think through a few more things like whether or not the furniture will fit through all doorways, or will it cross through your stairs?

Here are some measurements that you should consider before you order a large piece of furniture, so that it reaches its destined area in the house successfully, without much hassle.

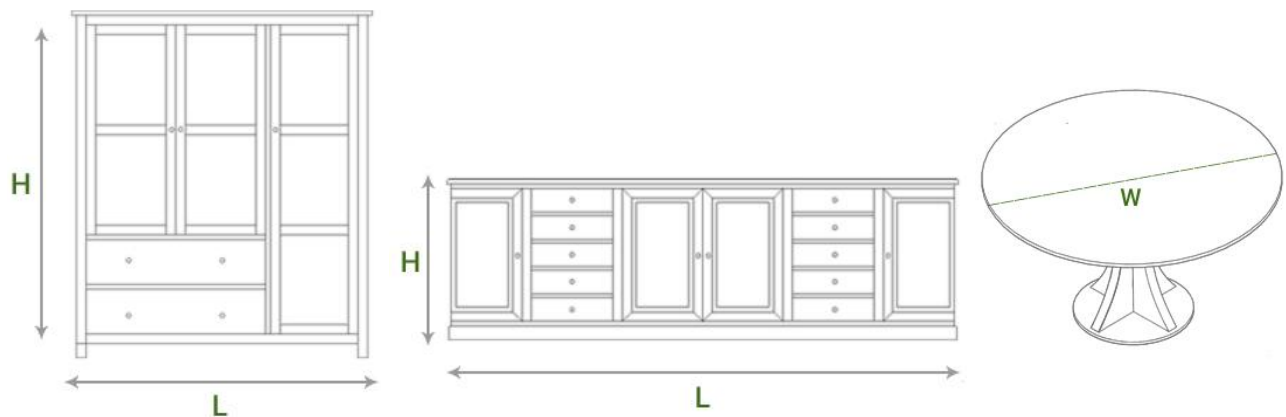

Take the following measurements to make sure that the furniture fits:

1. The height of your entryway.
2. The width of your entryway.
3. In the case of stairs, measure the width.
4. Width of corners in stairs or passages & clearance to the next wall.
5. Height of the ceiling or overhang on stairs.
6. Width of interior doorways and clearance to the opposite wall.
7. Height of interior doorways.
8. Height from floor to any low-hanging fixtures in the way.

Note: For apartments and multi-story homes with elevators, it is important to measure the height and width of the insides, along with the elevator's opening and its distance from the opposite wall.

Follow these steps to ensure a smooth delivery of your furniture. Many a time, just an inch of space can make all of the difference and save you the time and energy when moving large furniture pieces.

There could also be times when you have your eyes set on furniture that you don't think would fit in. This is when Our [Customization Services](#) come to the rescue. Get your favorite piece of furniture made in the exact size, shape and shade you want.
